Matija Stepanić

Senior Software Engineer · Full-Stack & AI-Native Development

Zagreb, Croatia (CET, UTC+1) · stepanic.matija@gmail.com
stepanic.domovina.ai · GitHub · LinkedIn · Toptal

Software engineer with 20 years of professional experience (since 2006) and 200+ delivered projects. MSc in Computer Science (FER, University of Zagreb). Founder & CEO of ITalk Ltd., Toptal Verified Expert, certified FlutterFlow Expert since 2022 with 50+ FlutterFlow consulting projects. Currently building AI-native products end-to-end: the DOMOVINA media-AI platform (RAG in ClickHouse, a public MCP server, Flutter, self-hosted Supabase) and PINKA on-chain crowdfunding. 4,949 GitHub contributions in the last year across 113 public repositories, working open-source-first with agentic AI tooling — 25B+ tokens processed with Claude Code, fully documented in a sourced public usage record. GitHub's raw counter reads 37,659, but 32,710 of those are automated commits publishing an open transcript corpus, so the corrected figure is the one quoted here.

EXPERIENCE

Founder & Lead Engineer — DOMOVINA.tv / DOMOVINA.ai — 06/2025 – present

- Designed and built the full platform solo using agentic AI development: Flutter app (web, iOS, Android, TV), self-hosted Supabase backend behind Kong on Coolify, and a Cloudflare edge layer — 4,949 GitHub contributions in a year across the ecosystem's code, separate from the 32,710 automated commits that publish the open transcript corpus.
- Implemented RAG search over the archive — bge-m3 embeddings in ClickHouse (HNSW, ~10–50 ms) with PostgreSQL metadata — and a production MCP server (mcp.domovina.ai) with OAuth, per-client rate limiting and an audit dashboard, usable from Claude, ChatGPT and Cursor.

Co-Founder & Lead Engineer — PINKA Finance — 09/2025 – present

- Architected and shipped the bilingual (HR/EN) marketing site and campaign/checkout app: Next.js 14 static export served by Cloudflare Workers with D1, custom i18n engine with CLDR plural rules.

Founder, CEO & Senior Software Engineer — ITalk Ltd. — 01/2016 – present

- Worked as a FlutterFlow expert/consultant on 50+ projects: custom Flutter features, Firebase Cloud Functions integrations, published reusable open-source FlutterFlow components.
- Built a FlutterFlow identity-document scanning widget on top of BlinkID native SDKs, adopted by 1,119 different FlutterFlow projects.
- Led a team of 9 building ScanShop, a self-checkout retail platform: architecture and backend with NestJS + Parse Server, Angular PWA, native iOS/Android apps.

Software Engineer — Freelance — 01/2006 – 01/2016

- Developed an internal CRM for membership and activities of a Croatian public organisation — in production since 2008 with ~1,500 active users.

SELECTED PROJECTS

- **DOMOVINA.tv / DOMOVINA.ai** — AI-native Croatian media platform of 30+ public repositories, built end-to-end by one engineer. An automated pipeline (Whisper.cpp on Metal, NVIDIA Canary on Colab GPUs, pyannote diarization, Gemini via multi-region Vertex AI) has processed 3,157 podcast episodes across 48 channels into 144,294 semantic RAG chunks, searchable through a public MCP server and a Flutter app that ships to web (WASM), iOS, Android and Android TV. (Flutter, Dart, Python, Node.js)
- **domovina-rag — RAG backend & public MCP server** — Self-hosted semantic-search backend over a Croatian podcast corpus: 144,294 RAG chunks from 3,157 episodes across 48 channels (~2,990 hours of audio, 2,698 distinct speakers), embedded with bge-m3 and stored in ClickHouse (HNSW vector index, ~10–50 ms queries) alongside PostgreSQL as the transactional source of truth. Exposed worldwide through a production MCP server, so Claude Desktop, Claude.ai, ChatGPT and Cursor can query the corpus as a native tool. (TypeScript, Python, ClickHouse, PostgreSQL)
- **PINKA Finance** — Group-fundraising platform bridging bank transfers and on-chain money. Campaign & checkout app (Next.js 14) where backers pay by scanning a SEPA EPC QR code or on-chain via Monerium EURe on Gnosis Chain; Foundry smart-contract suite (PinkaFactory, PinkaToken, PinkaCrowdfund) supports four parallel investment paths — ERC677 transferAndCall, approve+invest, SEPA bank transfer via Monerium webhook, and Safe multisig. (Next.js 14, TypeScript, Solidity, Foundry)
- **flutter_certilia** — Open-source Flutter package for the Certilia Identity API — Croatian national eID (NIAS) authentication for Flutter apps, with documentation site. 110+ commits in the last year. (Flutter, Dart, OAuth2, eID)

SKILLS

Languages: TypeScript / JavaScript (15) · Dart (7)
Frameworks & Runtimes: Node.js (15) · Flutter (7) · FlutterFlow (5) · Next.js / React (5)
Cloud & Infrastructure: Cloudflare (Workers, D1, R2, Pages) (3) · Firebase / GCP (12) · Supabase (self-hosted) (2)
AI Engineering: Agentic development (Claude Code) (2) · RAG pipelines (2) · MCP servers (2)
Other: Software architecture (14)

EDUCATION

Master of Science in Computer Science, University of Zagreb, Faculty of Electrical Engineering and Computing (FER) (2013–2015) ·
Bachelor of Science in Computer Science, University of Zagreb, Faculty of Electrical Engineering and Computing (FER) (2009–2013)
Certifications: Toptal Verified Expert in Engineering (2022) · Certified FlutterFlow Expert (2022)
